The word of the year selection process which began in early 2018 has reached its conclusion. After much consideration and debate we have come to the conclusion that the word of the year is “virus”. A: I'm on a phone, so I can't test this. You could try `sed -i "s/\r$//" -e "s/\r $//" -e "s/\r/ /" my_textfile` That should remove any carriage returns and line breaks before the last line, which will be a new line character. The backslash at the beginning removes the special meaning of \$ and escapes it to prevent it from being

---

used as a regex delimiter. The rest of the backslashes are backslash escape sequences and \$ refers to the end of the line. 1. Field of the Invention The present invention relates to a radio transmission and reception method and system. More particularly, the present invention relates to a method and system for a Radio Wave Pattern (RWP) transmission and reception technique in a Universal Mobile Telecommunication Service (UMTS) communication system using a ReFlecting Pulsed

---

Oscillation (RPOL) technique, which may increase the coding gain of an uplink channel. 2. Description of the Related Art In general, a Radio Wave Pattern (RWP) is a pattern of uplink interference occurring in a UMTS communication system, which causes a mobile station (MS) to increase errors during uplink data transmission. The pattern of uplink interference is transmitted from a base station (BS) to an MS via a control channel. An MS demodulates data transmitted from

---

a BS using the received pattern of uplink interference, thereby generating interference to an adjacent cell, and then, uplink data are transmitted. Here, the MS may increase errors due to the transmitted pattern of interference. To transmit a pattern of interference to the MS, a signal including the pattern of interference is required. In the case of a mobile communication system, the pattern of interference may be transmitted via a signal such as a control channel. Therefore, the pattern of

---

interference may be determined by an RWP transmission scheme. The RWP transmission scheme is a scheme for improving system performance in an environment in which the channel between an MS and a BS is a slowly varying narrow band channel. The RWP transmission scheme is a scheme in which a pattern of interference is transmitted to the MS by using
