Then you can read the manuscript online, or print it. CLICK ON THE MENU BUTTON AND SELECT 1, 2, 3, 4 or 5, as required.Q: Python unable to find module after updating to 2.6 I recently updated my python installation from 2.4.3 to 2.6.1. I now have an issue that i am unsure how to resolve. After updating my python installation, I have a problem in python where after importing a module called 'django' i get the error Traceback (most recent call last): File "setup.py", line 22, in ext_modules = (Extension(name, File "C:\Program Files\Google\google_appengine\google\appengine\ext\appengine_extras.py", line 61, in __init__ super(ExtensionClass, self).__init__(name, sources, **kwds) File "C:\Python26\lib\site-packages\setuptools\extension.py", line 64, in __init__ self._load() File "C:\Python26\lib\site-packages\setuptools\extension.py", line 88, in _load raise ImportError("Could not import Django. Are you sure it's installed and " ImportError: Could not import Django. Are you sure it's installed and available on your PYTHONPATH environment variable? Did you forget to enable it when you configured Django? Did you add the correct " I have a suspicion that it is due to the fact that my python installation is in a different location than it was on my previous install, and thus the 2d92ce491b
