hi,i have a problem with the activation key.is it possible to have a. i have the cd but no serial number on it. i want to give this to someone so i need the serial number to activate it.. wat is the activation key? July 10, 2012 hi,i cant get the activation code for ninjabed,can anyone please help me with it?i am trying to activate it but i just cant get the.. wat is the activation code?!(indmedgaz71144-0009){#sp1.1} !(indmedgaz71144-0010){#sp2.2} !(indmedgaz71144-0011){#sp3.3} !(indmedgaz71144-0012){#sp4.4} !(indmedgaz71144-0013){#sp5.5} The sun gives out radio waves that are picked up by the radio telescope at the South Pole, and when a massive solar storm is in progress the waves are frequently greatly amplified. We can sometimes even detect signals from outer space in the form of cosmic radiation. The highest spikes in this storm are known as solar flares, when the intense magnetic field of the Sun erupts, releasing huge amounts of energy that can be detected on Earth. A new study, led by physicists at the University of Birmingham, has for the first time calculated the amount of radio waves that reach Earth from a solar flare and found that it's still far below the annual background level of manmade emissions. This is the case because solar flares only last for about an hour, but over longer periods they are very, very rare. The total amount of energy released by a single solar flare is the same as the total energy released by all the power stations in the world in one year. One of the researchers, A.K. Brown, said: "Most people would not believe us if we told them that solar flares are a very small source of background radio noise, but that is what we have found." The background noise produced by manmade sources is currently very low, and most radio telescopes are sensitive to a background of about a tenth of a nanoWatt per square metre. But radio waves from solar flares are amplified by thousands or millions of times. The new work, published in Nature Communications, is the first ever 2d92ce491b
