File Repair has its own issues, but overall it is a good freeware. Coding errors and malicious applications are rare, but such things do happen. You should consider this when considering a program as good or bad. That being said, File Repair by FileSet is a good freeware. It was developed specifically for OS X and is consistent with the OS's default application folder hierarchy. So unless you are trying to delete your system files, you can trust File Repair. I like the interface because it looks very neat and clean. The Help file comes in handy, since it is very thorough and can do just about everything you might ever need. However, the program is not without faults. It has a few very interesting features and it is good enough to be "good" freeware, but it does have a few little flaws. First off, the developer does not currently accept donations. There is no source available on their site, either, so it looks like they want to stay as a freeware only. This is probably a good thing. If they want donations, they should make sure they distribute the required files, instead of just having a file inside their program directory. Secondly, the programs help file is a bit lacking. It does not contain any official documentation as to what a user can do or how to use the program. It also does not have a section that gives a full list of the features and features explained by the program. There are some nice features, though. File Repair can fix file system problems, like bad file permissions or deleted files. However, it doesn't take care of any other issues. It can make a backup folder or restore files to a particular location and it is possible to remove extra or duplicate entries from the "right click" menu. All in all, File Repair is a decent freeware. I would not recommend it, however, as a fix or repair tool. It only takes care of file system problems and will only make sure that they are the same as they were before they started. Unfortunately, it cannot fix other issues. File Repair is a good freeware. TranscriptAnnotationsCleaner is a good freeware that can clean up your subtitle files. Coding errors and malicious applications are rare, but such things do happen.
